VISA STATUS: **D-10** (Job Seeker)

HARD SKILL

- **Programming Languages:**
TypeScript, NodeJS, Python, PHP
- **Frameworks:** FastAPI, Express, NestJS, Django, NextJS
- **DevOps:** Docker containers, Kubernetes, Terraform & PM2
- **Agentic Development:**
Codex, Claude and Cursor

SOFT SKILL

- Cross-cultural communication
- Agile teamwork and collaboration
- Adaptability to new technologies
- Persistence and accountability
- Proactive communication

ACHIEVEMENTS

Best Employee Award

May 2024 - June 2024

Recognized for achieving the project goals ahead of schedule and received a 5% salary increase.

PROJECTS

[pawpall.online](#)

[venturo.network](#)

Full-Stack Developer, DevOps Engineer, and AI Engineer with **4+** years of experience building scalable web services, backend systems, production infrastructure, and AI-powered applications. I work with **React, Next.js, NestJS, Python, APIs**, databases, **Docker**, and **Linux**-based environments. My strengths include clean architecture, **CI/CD** automation, and improving development productivity through **Agentic AI** workflows powered by **Cursor, Codex**, and **OpenAI** technologies. I hold an M.S. in Engineering (AI Business) and am currently based in Seoul.

EXPERIENCES 4 years 3 months

Innovatech development - Full-Stack Developer

May 2023- April 2026

- Designed and operated full-stack platforms based on Next.js, NestJS, and FastAPI.
- Built reusable React component libraries to improve frontend maintainability.
- Introduced Redis caching to improve API response speed and support stable operation under high traffic.
- Designed secure REST / GraphQL APIs and backend structures based on clean architecture principles.
- Collaborated across frontend, backend, and infrastructure to improve system stability and scalability.
- Built and automated CI/CD pipelines using Docker and Terraform, improving deployment and operational efficiency.
- Applied Cursor / Codex-based Agentic development workflows to improve development productivity and code quality.

TechNest Digital - Frontend Developer

January 2022- March 2023

- Developed and maintained React-based single-page applications (SPAs).
- Designed reusable UI components and structured the frontend architecture.
- Integrated REST APIs and implemented asynchronous state management using Redux / Context API.
- Applied responsive web design to ensure mobile and cross-browser compatibility.
- Collaborated remotely with backend and design teams throughout feature development and deployment.

EDUCATION

Master of Science in Engineering (AI Business)

Seoul Media Institute of Technology (SMIT)

March 2024 - February 2026 / Graduated February 25, 2026

Bachelor in Physics

Namangan State University, Namangan, Uzbekistan

September 2019 - June 2023
